

BEST SCOPING TECHNIQUES TRAINS THE DISABLED TO WORK FROM HOME  
Announcing a unique partnership with the University at Buffalo,  
Center for Assistive Technology

Bonita Springs, FL—"BeST" Scoping Techniques is excited to announce the newest addition to the online campus and the unique partnership with the University at Buffalo, Center for Assistive Technology. BeST was chosen to be the only scopists training program to work with people with disabilities who desire to work from a home office. A customized version of the online campus was created to meet any special needs.

A scopist is a professional who provides computer-aided transcription services for court reporters. The scopist receives the reporter's translated, unedited, unresearched notes on a computer disk or via the Internet or email. With the aid of specialized software and the scopist's skills of translating any undefined stenotype into English, punctuating, researching and formatting, flagging any questionable areas, the transcript is then returned to the reporter ready to be proofread.

Training is self-paced, and most students finish the program in three to six months. Upon completion of the program, new graduates are assisted in finding their first clients via a professionally designed Web page, business cards, a listing in the BeST Marketing Directory as well as direct contact by court reporters who are seeking professionally trained, qualified scopists.

BeST understands the need for legitimate and obtainable work for those with disabilities and is very excited to be working with the university in meeting this demand. They are currently in talks with other universities and state agencies to help get the word out to others who may be able to take advantage of this new opportunity.

BeST Scoping Techniques has been training students since 2002. For more information, please visit the online campus at [BestScopingTechniques.com](http://BestScopingTechniques.com) or call Judy at 239-949-0763.
